

Monitor Test Assets

The Challenge:

System Test capital assets are costly to design, deploy and maintain. Ensuring the integrity of the entire infrastructure to maintain consistent high quality is paramount. Throughput and Utilization impact revenue; Test Time Reduction and infrastructure optimization are an everyday focus.

The Solution:

Optimal+ Global Ops for Electronics monitors worldwide test infrastructure assets in real-time. It enables engineers to track parametric variations across testers; ensure test integrity and consistency; and monitor asset utilization and tester stability while optimizing the cost of ownership.

Test Infrastructure Management

Test Equipment Utilization
